

Why Choose Digital Motion Productions?

We at **Digital Motion Productions** are not experts in the field of photography. We do not do photo restoration nor do we touch up images. We scan images "as they were taken", at a resolution that suits television viewing.

Why Digitize?

Scanned 35mm Slide

We at **Digital Motion Productions** firmly believe that your photo's are one of the most precious commodities that you own. Unfortunately they sit around in closets and drawers viewed occasionally, usually on special occasions. Slides sit in boxes, carousels, and cubes, viewed rarely. Pulling out that

cumbersome screen and projector, then waiting for darkness is simply too much work. Then there's the dreaded jam-up and of course the infamous bulb implosion. Parts will soon be no longer available for these "Dinosaurs". Then what? View them on a battery operated hand held "Toy"?

Any film media will, over time, lose its colour and will eventually fade so that they look like pictures from the past. **Digital Motion Productions** can stop this process. We can put all your precious memories onto a DVD where you can watch them on your TV along with all your favorite tunes. This past Christmas our family were all over and our Slide Show was a huge hit. We had to pry people away from the TV. What a conversation piece!!

If a disaster such as fire occurs, all your memories will be lost forever. They cannot be replaced. This is why we recommend a second or even third copy of your DVD Slide Show so that you can give a copy to your children or even keep a copy in your safety deposit box.

Scanned Photograph

Our Process

Super 8mm & 8mm Movies are transferred to DVD using state of the art frame by frame capturing.

All photographs are scanned using Canon CanoScan 8400F scanners with FARE 3 Technology, (dust and scratch removal), at a resolution of 300DPI.

All 35mm slides are scanned using Canon CanoScan FS 2710 scanners at a resolution of 680DPI

DPI stands for dots per square inch. These resolutions are perfect for TV viewing.

Our software enables image reproduction with dazzling special effects. All presentations are produced using High Quality DVD Video Rendering.

Once the images are burned to DVD you are no longer able to access them for printing or simply viewing without the SlideShow. This is why we include a CD with the "Jpeg Files". CD not included if Jpeg files fit on DVD.
